

Kuehne
LABORATORY SERVICES

Committed to Excellence

Transforming routine samples into user-friendly results

About

Kuehne Laboratory Services specializes in analyzing a variety of samples, including water, brine, sodium hypochlorite, caustic soda, and hydrochloric acid, for parameters such as density, concentration, metals, ions, pH, and conductivity.

Our goal is to provide continuous support to our customers by transforming their routine samples into user-friendly results, helping them maintain their quality assurance standards.

Our Team of Experts

With over 55 years of combined experience and diverse educational backgrounds in analytical and process manufacturing, our scientists and technicians deeply appreciate the significance of accurate data. They bring a wealth of knowledge gained from working across various industries, including environmental labs, aviation, marine, and particularly the chlor alkali sector.

They are proficient in both ISO and Six Sigma certification programs and have extensive exposure analysis expertise. Additionally, they possess a vast understanding of instrumentation, enabling them to analyze samples with exceptional precision, even down to parts per billion.

Proficiencies

We stand prepared to tackle your analytical challenges in the realm of inorganic materials, transforming your samples into valuable, actionable data. Our proficiency extends to the following areas:

- ICP-MS QQQ
- ICP-OES
- HPLC
- Density Meter
- pH Meter
- Conductivity Meter
- Titrations

On-Site Instrumentation

Inductively Coupled Plasma (MS & OES)

Empowers us to conduct precise and accurate measurements on metals within your samples. Additionally, we hold certification for analyzing drinking water.

Ion Chromatography

Empowers us to analyze important ions such as chlorides, chlorates, and sulfates.

Density, pH, and Conductivity Meters

Empowers us to monitor the properties of your samples, permitting you to maintain control of your process.

Auto Titrators

Empowers us to measure acid or base concentrations, as well as sodium hypochlorite concentrations.

Curated Services

We conduct an extensive array of chemical and physical analyses to ascertain the purity and concentration of chlor alkali products. This includes employing advanced techniques such as ICP-MS, ICP-OES, and HPLC.

Our commitment extends beyond analysis; we offer continuous services to assist clients in monitoring and maintaining their quality assurance standards.
